

Scope of delivery

Piles and straps

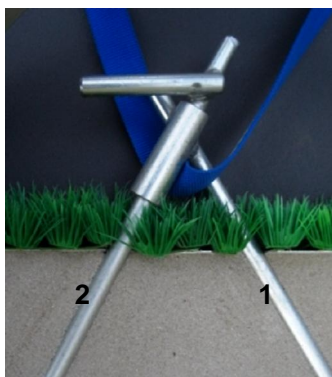

To tie down your airplane look for a proper spot with dry and solid ground (sand, mud and stones are not suitable).

1. Drive pile no 1 (with the tube) into the ground with an angle of 45°.
2. Slide pile no 2 through the tube of pile no 1 and drive it also into the ground.
3. Push the strap under the piles, put it with the cover over the wing (beside the ailerons) and tighten it.

It would be good for your glider if you have additional to the tie-down-set 2 wingstands to put them under the wings right under the belt..

Reverse: Pull pile no. 2 and afterwards pile no. 1

TIE-DOWN-SET

Includes 3 piles no 1
3 piles no 2
1 hammer, 500g
3 straps, 4m long, with cover,

You can cut the straps and seal them with a pocket lighter.
